Reading, Understanding, and Applying Nursing

Research Feb 02 2023 "This sixth edition of Reading, Understanding, and Applying Nursing Research has been updated while retaining all important features of previous editions. The book has been updated to better guide students in their understanding

of evidence-based practice. The book continues to be directed toward undergraduate students, RNs returning to school, and practicing nurses. This edition continues to emphasize how to read research reports, evaluate them critically, and apply findings to practice by providing more examples of nursing research throughout the book. Steps of the research process are illustrated with excerpts from studies that have been published in nursing literature"--

Authoritative content is written

by two of the true pioneers in nursing research, who offer unique, first-hand insights into the field. Research examples provide practice in working with published studies, with many of the examples including Critical Appraisal and Implications for Practice sections. Clear, step-by-step organization introduces the research process and demonstrates how this systematic framework relates to evidence-based practice. Strong emphasis on evidence-based practice helps you develop skills in studying and appraising published research, so you are prepared for your role in working with research evidence. Critical Appraisal

Guidelines boxes provide step-by-step guidance in appraising published research studies. Emphasis on critical appraisal versus critique reflects contemporary usage in nursing research and evidence-based practice. Balanced coverage of qualitative research prepares you to approach research questions and clinical questions with an unbiased view of the researcher's methodology. Presentation of two different appraisal processes covers both the traditional in-depth critical appraisal process that prepares you for graduate-level work in research, and the concise, practice-focused research appraisal process that equips you for quick and

accurate evaluation of the applicability of research findings to clinical practice.
