Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems. Agile development processes foster better collaboration, innovation, and results. So why limit their use to software projects—when you can transform your entire business? Perkins, a former chief economist at a Boston strategic-consulting firm, confesses he was an "economic hit man" for 10 years, helping U.S. intelligence agencies and multinationals cajole and blackmail foreign leaders into serving U.S. foreign policy and awarding lucrative contracts to American business. Indicators of child and youth well-being are indispensable tools for improving the lives of children. In this book, the nation's leading development researchers review the recent progress made in the measurement, collection, dissemination, and use of indicators of child and youth well-being. In addition, they identify opportunities for future research to expand and improve on the indicator data available, so as to develop greater measures of positive development. The first eleven chapters cover key indicators in the areas of health, education, social, and emotional development and then social context indicators of the family, peers, school, and the community. The book then goes on to demonstrate the use of indicators for influencing policy at the state and local levels. One chapter discusses how social indicators were used to guide welfare reform and another recounts the use of the indicators to guide local planning. The volume concludes with a discussion of summary indices of well-being and the methodological challenges of constructing such indices. Written in an accessible manner for policy makers, practitioners, and researchers concerned with children's well-being, including experts in developmental, social, community, and educational psychology, the book also serves as a supplementary text in public policy and the social sciences. The policy chapters will be of particular interest to those who use child and youth indicators to guide policy development. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes

recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples, as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book (which itself has been updated with additional examples and appendices) and significant new results which have appeared since the first edition. Comprehensive background material is provided, so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.

**WINNER OF THE PULITZER PRIZE • THE EMMY AWARD—WINNING HBO MINISERIES STARRING FRANCES MCDORMAND, RICHARD JENKINS, AND BILL MURRAY** In a voice more powerful and compassionate than ever before, New York Times bestselling author Elizabeth Strout binds together thirteen rich, luminous narratives into a book with the heft of a novel, through the presence of one larger-than-life, unforgettable character: Olive Kitteridge. At the edge of the continent, Crosby, Maine, may seem like nowhere, but seen through this brilliant writer's eyes, it's in essence the whole world, and the lives that are lived there are filled with all of the grand human drama—desire, despair, jealousy, hope, and love. At times stern, at other times patient, at times perceptive, at other times in sad denial, Olive Kitteridge, a retired schoolteacher, deplores the changes in her little town and in the world at large, but she doesn't always recognize the changes in those around her: a lounge musician haunted by a past romance: a former student who has lost the will to live: Olive's own adult child, who feels tyrannized by her irrational sensitivities; and Henry, who finds his loyalty to his marriage both a blessing and a curse. As the townspeople grapple with their problems, mild and dire, Olive is brought to a deeper understanding of herself and her life—sometimes painfully, but always with ruthless honesty. Olive Kitteridge offers profound insights into the human condition—its conflicts, its tragedies and joys, and the endurance it requires.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products. A comprehensive, multidisciplinary review, *Neural Plasticity and Memory: From Genes to Brain Imaging* provides an in-depth, up-to-date analysis of the study of the neurobiology of memory. Leading specialists share their scientific experience in the field, covering a wide range of topics where molecular, genetic, behavioral, and brain imaging techniques have been used to investigate how cellular and brain circuits may be modified by experience. In each chapter, researchers present findings and explain their innovative methodologies. The book begins by introducing key issues and providing a historical overview of the field of memory consolidation. The following chapters review the putative genetic and molecular mechanisms of cell plasticity, elaborating on how experience could induce gene and protein expression and describing their role in synaptic plasticity underlying memory formation. They explore how putative modifications of brain circuits and synaptic elements through experience can become relatively permanent and hence improve brain function. Interdisciplinary reviews focus on how nerve cell circuitry, molecular expression, neurotransmitter release, and electrical activity are modified during the acquisition and consolidation of long-term memory. The book also covers receptor activation/deactivation by different neurotransmitters that enable the intracellular activation of second messengers during memory formation. It concludes with a summary of current research on the modulation and regulation that different neurotransmitters and stress hormones have on formation and consolidation of memory. In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome. This new chronological edition is based on the well-established topically organized text by Bukatko and Daehler, Child Development: A Thematic Approach, 5/e. Addressing physical, social, and emotional development in a linear fashion, this text starts with pre-natal development and progresses through birth and the newborn baby, infancy and toddlerhood, early childhood, middle childhood, and adolescence. Developed to accommodate the more applied focus of courses in nursing, parenthood, education, family studies, and human ecology, this text benefits from the authors' focus on research through an emphasis on developmental themes. Five themes on development are found in every chapter and are listed in the chapter opener, called out in the margin where the theme is addressed, and summarized in a Summary of Developmental Themes section at the end of the chapter. The five themes explore nature and nurture; sociocultural contexts; continuous vs. discontinuous development; the domains of development; and risk or resilience in development. Extensive "Contexts of Development" chapters for each development stage broaden the scope of the issues discussed by examining the child/adolescent within the context of family, peers, and community. Research Applied to Parenting/Education boxes provide practical advice based on research findings and cover such topics as reducing SIDS, monitoring TV viewing, reciprocal teaching, and reading to children. Atypical Development sections focus on topics related to non-normative development, including eating disorders, autism, attention deficit disorder, detecting hearing loss, depression, conduct disorders, and post traumatic stress disorder (PTSD). Summary Tables are two-page graphic timelines that summarize the various milestones of development and show the sequence of the child's development within a given domain (infancy, early childhood, middle childhood, adolescence). Chapter-Opening Vignettes draw students into real-life scenarios by applying and exploring concepts of development. Marginal features, See for Yourself and What Do You Think?, invite students to critically evaluate and explore further related material on the Online Study Center. Additional pedagogy includes section summaries within each chapter and comprehensive Chapter Recaps that feature a Summary of Developmental Themes, a Chapter Review, and a list of Key Terms and Concepts.
