Firearm Safety Certificate - Manual for California Firearms Dealers and DOJ Certified Instructors Apr 17 2022 The growing concern over the number of accidental firearm shootings, especially those involving children, prompted passage of the initial handgun safety law which went into effect in 1994. The stated intent of the California Legislature in enacting the current FSC law is for persons who obtain firearms to have a basic familiarity with those firearms, including, but not limited to, the safe handling and storage of those firearms. The statutory authority for this program is contained in Penal Code sections 26840 and 31610 through 31700. These statutes mandate DOJ to develop, implement and maintain the FSC Program. Pursuant to Penal Code section 26840, a firearms dealer cannot deliver a firearm unless the person receiving the firearm presents a valid FSC, which is obtained by passing a written test on firearm safety. Prior to taking delivery of a firearm from a licensed firearms dealer, the purchaser/recipient must also successfully perform a safe handling demonstration with that firearm..

Implementing Safety Management Systems in Aviation May 26 2020 The International Civil Aviation Organization has mandated that all of its member states implement Safety Management Systems (SMS) in their aviation industries. Responding to that call, many countries are now in various stages of SMS development, implementation, and rulemaking. In their first book, *Safety Management Systems in Aviation*, Stolzer, Halford, and Goglia provided a strong theoretical framework for SMS, along with a brief discourse on SMS implementation. This follow-up book provides a very brief overview of SMS and offers significant guidance and best practices on implementing SMS programs. Very specific guidance is provided by industry experts from government, industry, academia, and consulting, who share their invaluable insights from first-hand experience of all aspects of effective SMS programs. The contributing authors come from all facets of aviation, including regulation and oversight, airline, general aviation, military, airport, maintenance, and industrial safety. Chapters address important topics such as how to develop a system description and perform task analyses, perspectives on data sharing, strategies for gaining management support, establishing a safety culture, approaches to auditing, integrating emergency planning and SMS, and more. Also included is a fictional narrative/story that can be used as a case study on SMS implementation. *Implementing Safety Management Systems in Aviation* is written for safety professionals and students alike.

Measurement Matters Mar 04 2021 ?Many organizations still operate with an all-too-familiar polarization between managers and employees. The work of employees is checked, measured, audited, and rechecked. Incentive programs, quotas, and evaluations are doggedly adhered to. And often, as a result, resources are wasted, morale plummets, and defects actually increase. Why exactly does this system continue to run amok? What is an effective alternative? By installing an effective assessment process that successfully measures employee performance without impeding production, the organization can become more efficient and employee satisfaction increases. *Measurement Matters* builds on the principles of Dr. W. Edwards Deming, as well as the life experiences of both authors, to create a unique, proven approach to effecting positive change in organizations and individuals. This book is full of entertaining, eye-opening examples we can all relate to that combine human psychology with hard data to prove there is a better way. By implementing positive change, and properly measuring and assessing the progress, an organization and its employees can grow and prosper. PRAISE FOR *Measurement Matters* "Measurement Matters by Carder and Ragan is a book that should be read by practitioners interested in understanding and improving the underlying factors that affect the safety, health and environmental performance of firms." Isadore (Irv) Rosenthal, Senior Fellow Wharton Risk Management and Decision Processes Center Nominated by President Clinton, and confirmed by the Senate, to a five-year position as a member of the National Chemical Safety and Hazards Investigation Board in 1998.

Safety with Lasers and Other Optical Sources Jan 14 2022 Nearly a decade ago a general review article on the evaluation of optical radiation hazards was published in *Applied Optics* (Sloney and Freasier, 1973). This article received many favorable comments but also prompted many inquiries regarding specific optical hazard problems. From this it became evident that a monograph rather than a supplemental and expanded article was needed to fill this literature gap relating to laser and optical radiation hazards. The present work is designed to fill that gap, and is structured to permit either classroom or self-study use. Much of the material in this book was developed in connection with short courses on laser safety and radiometry in which we have participated, as well as from our previous articles. In particular, the sequence of chapters is based upon the experiences which we have had in lecturing in courses with different schedules. One of the great difficulties in developing a text of this nature is that a broad, multidisciplinary background must be included in order that the reader can comprehend all of the subject matter readily. For this reason, the material presented on anatomy and physiology is oriented toward the engineer or physical scientist, while the review material on basic optical physics is intended more for the physician or life scientist.
