This edition of the U.S. Geological Survey (USGS) Minerals Yearbook discusses the performance of the worldwide minerals and materials industries during year 2013 and provides background information to assist in interpreting that performance. These annual reviews are designed to provide timely statistical data on mineral commodities in various countries. This volume covers data from Asia and the Pacific. Each report includes sections on government policies and programs, environmental issues, trade and production data, industry structure and ownership, commodity sector developments, infrastructure, and a summary outlook. Audience: Government employees and contractors, as well as businesses and employees, all working in mineral-related trades, especially with interests in statistics about mineral commodities overseas,

will find this resource invaluable. Check out our Minerals & Metals publications here: <https://bookstore.gpo.gov/catalog/science-technology/minerals-metals> Other print volumes in the Minerals Yearbook series are available here: <https://bookstore.gpo.gov/catalog/science-technology/minerals-metals/minerals-yearbook>

This book functions as a comprehensive and authoritative reference book in blood transfusion and blood substitutes. It is a collection of the latest developments and the newest investigations, and individual chapters are written by world experts in the arena. The book begins with a historical review on the practice of transfusions as well as the components and physiology of blood. The following chapters cover various topics, including platelet substitutes, hemoglobin-based oxygen carriers, perfluorocarbon based oxygen carriers, and safety issues related to artificial hemoglobin. All chapters provide a bulleted highlights list to facilitate readers in mastering the main points of each individual chapter. Blood Substitutes and Oxygen Biotherapeutics is an invaluable reference book for perioperative care providers, hematologists, anesthesiologists, surgeons, obstetricians and gynecologists. There is an urgent need to better understand the legal issues pertaining to alternative

dispute resolution (ADR), particularly in relation to mediation clauses. Despite the promotion of mediation by dispute resolution providers, policy makers, and judges, use of mediation remains low. In particular, problems arise when parties lack certainty regarding the legal effect of a mediation clause, and the potential uncertainty regarding the binding nature of agreements to pursue mediation is problematic and threatens the growth of ADR. This book closely examines the importance and complexity of mediation clauses in commercial contracts to remedy this persistent uncertainty. Using comparative law methods and detailed empirical research, it explores the creation of a comprehensive framework for the mediation clause. Providing valuable insight into the process of ADR and mediation, this book will be of interest to academics, law makers, law students, in-house council, lawyers, as well as parties interesting in drafting enforceable mediation clauses. This book constitutes the thoroughly refereed post-conference proceedings of the Satellite Events of the 14th European Conference on the Semantic Web, ESWC 2017, held in Portoroz, Slovenia, in May/June 2017. The volume contains 8 poster and 24 demonstration papers, selected from 105 submissions. Additionally, this book includes

a selection of 13 best workshop papers. The papers cover various aspects of the semantic web. The chapter 'Scholia, Scientometrics and Wikidata' is available open access under a CC BY 4.0 license via link.springer.com. This report offers a thought-provoking, necessary alternative to paralysis in the face of alarming planetary change. Its release comes as the COVID-19 (coronavirus) pandemic simultaneously offers a glimpse of what a 'new normal' could hold and opens up the opportunity for humanity to change course. The report also sets out new metrics of human development to guide us, including a new, experimental Planet Adjusted-Human Development Index. This book identifies the impact of internal and external stakeholders on the implementation of sustainable development policies in the coal mining sector in Europe and the Commonwealth of Independent States. The book assesses what activities and conditions need to be improved so that sustainable development policies can be more effectively and efficiently implemented. With a specific focus on the hard coal and lignite mining sectors, it examines a broad range of case studies from Eastern European countries and the Commonwealth of Independent States, including Russia, Ukraine, Poland, Kazakhstan, Germany, Spain, France and the United Kingdom,

among many more. Beginning with an introduction to sustainable development and stakeholder theory, Part II then examines internal stakeholders, including owners, managers, employees and trade unions. Part III examines external stakeholders, touching upon those directly related to the mining industry, such as customers and mining enterprises, and those not directly associated such as local and regional communities and environmental organisations. The book concludes by proposing a model approach to the management of stakeholders involved in mining enterprises, focusing on improving the process of implementing sustainable development in the mining sector and strengthening the effects of this process. This book will be of great interest to students and scholars of the extractive industries, natural resource management and policy and sustainable development. Divided into six parts, Section 1

presents a high-level overview of the technologically-enabled finance space. It also offers a historical perspective on technological finance models and outlines different business models. Section 2 analyses digital currencies including guides to bitcoins, other cryptocurrencies, and blockchains. Section 3 addresses alternative payment systems such as digital money and asset tokenization. Section 4 deals with crowdfunding models from both a theoretical perspective and from a regulatory perspective. Section 5 discusses data-driven business models and includes a discussion of neural networks and deep learning. Finally, Section 6 discusses welfare implications of the technological finance revolution. This collection highlights the most current developments to date and the state-of-the-art in alternative finance, while also indicating areas of further potential. Acting as a roadmap for future research in this innovative and promising area of finance, this handbook is a solid reference work for academics and students whilst also appealing to industry practitioners, businesses and policy-makers. This book explores the possibility of using social media data for detecting socio-economic recovery activities. In the last decade, there have been intensive research activities

focusing on social media during and after disasters. This approach, which views people's communication on social media as a sensor for real-time situations, has been widely adopted as the "people as sensor" approach.

Furthermore, to improve recovery efforts after large-scale disasters, detecting communities' real-time recovery situations is essential, since conventional socio-economic recovery indicators, such as governmental statistics, are not published in real time. Thanks to its timeliness, using social media data can fill the gap. Motivated by this possibility, this book especially focuses on the relationships between people's communication on Twitter and Facebook pages, and socio-economic recovery activities as reflected in the used-car market data and the housing market data in the case of two major disasters: the Great East Japan Earthquake and Tsunami of 2011 and Hurricane Sandy in 2012. The book pursues an interdisciplinary approach, combining e.g. disaster recovery studies, crisis informatics, and economics. In terms of its contributions, firstly, the book sheds light on the "people as sensors" approach for detecting socio-economic recovery activities, which has not been thoroughly studied to date but has the potential to improve situation awareness during the recovery phase. Secondly, the book

proposes new socio-economic recovery indicators: used-car market data and housing market data. Thirdly, in the context of using social media during the recovery phase, the results demonstrate the importance of distinguishing between social media data posted both by people who are at or near disaster-stricken areas and by those who are farther away. This book provides a comprehensive overview on the most recent knowledge in dermatophytic infection biology. Topics covered range from taxonomy, biology and genetics of most common skin disease causing fungi over immunology of dermatophytosis to diagnosis and treatment approaches. Furthermore epidemiology of skin diseases caused by pathogenic fungi is discussed. The book is aimed at researchers and advanced students in infection biology, microbiology and dermatology.

Ecological Significance of Riparian Ecosystems: Challenges and Management Strategies examines the current issues related to river ecosystems, their environmental importance, pollution issues and potential management strategies. The book is divided into 4 key themes: Basics of river ecosystem, Natural phenomenon of river ecosystem, Human-induced problems of river ecosystem, and Management measures for the river ecosystem. Through

these four themes, the contributors present both practical and theoretical aspects of river ecosystem in changing climate. An emphasis has been made on the recent research of climate change and its impact on the river ecosystem. River ecosystems have tremendous potential to store CO₂, however, with changing climatic and anthropogenic activities, these habitats are under threat, and river ecosystems are losing the very vital service of storing carbon. Unlike well documented terrestrial biodiversity, the biodiversity in aquatic ecosystems is still unrecognized to some extent. Presents an understanding of the biogeochemical processes of river ecosystems achieved by food webs and diverse biogeochemical processes Covers sediment dynamics and nutrient chemistry - hot topics in river ecosystems Includes environmental pollution issues in river ecosystems from various anthropogenic activities Developed over 20 years of teaching academic courses, the Handbook of Financial Risk Management can be divided into two main parts: risk management in the financial sector; and a discussion of the mathematical and statistical tools used in risk management. This comprehensive text offers readers the chance to develop a sound understanding of financial products and the mathematical models that

drive them, exploring in detail where the risks are and how to manage them. Key Features: Written by an author with both theoretical and applied experience Ideal resource for students pursuing a master's degree in finance who want to learn risk management Comprehensive coverage of the key topics in financial risk management Contains 114 exercises, with solutions provided online at www.crcpress.com/9781138501874 Why are Australians anxious and pessimistic? Who or what has caused our loss of trust in Australia? Why has a feeling of powerlessness crept in for so many? Has the luck really run out for the lucky country? And what can we do to get it back? Every generation believes its forebears have messed up the planet. That's how we evolve. But the mood in Australia at the moment, for all ages, seems one of gloom. People are angry. Distrustful. And not just because we are losing Prime Ministers faster than we are losing wickets! Sport, business, education, banking, farming, religion, trade unions, charities and hospitals have all lost their way through a series of scandals that we must learn from. And disillusion with our leaders is at its peak. Policy has been replaced by politicking. Commentator, author and former newspaper editor David Fagan asks the questions we all want answered as he

traces the not-so-gentle decline of important Australian institutions. Through analysis and interviews with experts he explores what has defined Australia in the past and how we want to be defined in the future. Peeling back the rot that has contaminated almost everything Australians believe in, he asks: are we still the economically, socially and culturally strong country that most aspire to? Should we be alarmed? Or has the laconic Australian drifted from believing 'she'll be right' to being a 'bloody knocker'? Has the Luck Run Out? shines a spotlight on the mistakes we have made, our national disillusion and looks to what can be done to re-set the mood of the times. And, more importantly, what we have to do to set things right. Prepare for the Project Management Institute's (PMI®) Agile Certified Practitioner (ACP®) exam. Storage Systems: Organization, Performance, Coding, Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive/Independent Disks proposal to

replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips—with one strip per disk—and storage reliability is enhanced via replication or erasure coding, which at best dedicates k strips per stripe to tolerate k disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives (SSDs) replacing Hard Disk Drives (HDDs) for high performance applications. RAID and Flash have resulted in the emergence of new storage companies, namely EMC, NetApp, SanDisk, and Purestorage, and a multibillion-dollar storage market. Key new conferences and publications are reviewed in this book. The goal of the book is to expose students, researchers, and IT professionals to the more important developments in storage systems, while covering the evolution of storage technologies, traditional and novel databases, and novel sources of data. We describe several prototypes: FAWN at CMU, RAMCloud at Stanford, and Lightstore at MIT; Oracle's Exadata, AWS' Aurora, Alibaba's PolarDB, Fungible Data Center; and author's paper designs for cloud storage, namely heterogeneous disk arrays and hierarchical RAID.

- Surveys storage technologies and lists sources of data: measurements, text, audio, images, and video
- Familiarizes with paradigms to improve

performance: caching, prefetching, log-structured file systems, and merge-trees (LSMs) • Describes RAID organizations and analyzes their performance and reliability • Conserves storage via data compression, deduplication, compaction, and secures data via encryption • Specifies implications of storage technologies on performance and power consumption • Exemplifies database parallelism for big data, analytics, deep learning via multicore CPUs, GPUs, FPGAs, and ASICs, e.g., Google's Tensor Processing Units Australian competition law has just emerged from a significant period of reform which has seen controversial changes to the legal test to distinguish between normal competitive conduct and conduct that should be condemned. The controversy continues, arguably because the traditional legal conception of market power does not provide a useful standard in real world markets. This important new book offers a radical interpretation of market power, based on the power to manipulate. Seeing it in this way allows for positive and normative standards within which to frame a legal theory of liability for misuse of that power. The book provides suggestions to improve the forensic assessment of conduct that should be condemned as misuse of market power. The Annual Update compiles reviews of the most

recent developments in experimental and clinical intensive care and emergency medicine research and practice in one comprehensive reference book. The chapters are written by well recognized experts in these fields. The book is addressed to everyone involved in internal medicine, anesthesia, surgery, pediatrics, intensive care and emergency medicine. This volume, covering metals and minerals, contains chapters on approximately 90 commodities. In addition, this volume has chapters on mining and quarrying trends and on statistical surveying methods used by Minerals Information, plus a statistical summary.
