Resource Selection by Animals Nov 20 2021 We have written this book as a guide to the design and analysis of field studies of resource selection, concentrating primarily on statistical aspects of the comparison of the use and availability of resources of different types. Our intended audience is field ecologists in general and, in particular, wildlife and fisheries biologists who are attempting to measure the extent to which real animal populations are selective in their choice of food and habitat. As such, we have made no attempt to address those aspects of theoretical ecology that are concerned with how animals might choose their resources if they acted in an optimal manner. The book is based on the concept of a resource selection function (RSF), where this is a function of characteristics measured on resource units such that its value for a unit is proportional to the probability of that unit being used. We argue that this concept leads to a unified theory for the analysis and interpretation of data on resource selection and can replace many ad hoc statistical methods that have been used in the past.

Unaccounted Jan 03 2023 During the Vietnam War, the Que Son Valley region was a very bad place with a very bad reputation. More U.S. Army infantrymen and Marines died there than at any other location in Vietnam. More Medals of Honor were awarded in this region than in any other single combat zone, ever. On 5 May 1968, the downing of two U.S. helicopters in the Que Son Valley marked the beginning of the North Vietnamese Army's second Tet offensive, with the goal of destroying all U.S. forces. At 1728 hours, Delta Company, 1st Battalion, 20th Infantry conducted a combat air assault to join Bravo Company, 1st Battalion, 6th Infantry at the helicopters' fatally downed location. Their experiences during the next six days set the stage for a three-month long battle that lasted only hours for some. In the end, there would be more than 2,300 dead and wounded, and one American Soldier missing in action. It will take over 44 years to find his location; UNACCOUNTED is his story. Keywords: Missing in Action, MIA, Infantryman, Vietnam, POW, Mission, Unaccounted, War

India and the IT Revolution Apr 25 2022 The 'Indian Techie' has become a global icon, taking its place alongside McDonalds and MTV as one

of the key symbols of contemporary globalization. India and the IT Revolution explores the contemporary emergence of cosmopolitan, high-tech India as marking the arrival of a truly global cyberculture. It argues against the notion that globalization is a process of 'Westernization', which radiates out unilaterally from the core, imposing itself upon a passive, backward periphery. Instead, it conceives of global culture as a dynamic, innovative network, which proceeds primarily from its edges.
