OPM created the Federal Employees Dental and Vision Insurance Program (FEDVIP), with coverage first available on December 31, 2006. Enrollees are responsible for 100% of premiums and may choose a self-only, self + 1, or family plan. Employees may still contribute to a Flexible Spending Account (FSA) to cover any qualified unmet medical expenses.

?INFLEXURE© BILINGUAL MANAGED CARE GLOSSARY of CONTACT CENTER and HEALTH PLAN TERMINOLOGY: MEDICAL, MH/SA, DENTAL, DISABILITY, FSA, VISION and HEARING, with CULTURAL LINGUISTIC: ENGLISH/SPANISH Apr 07 2021 The ?INFLEXURE© Bilingual Managed Care Glossary of Contact Center & Health Plan Terminology: Medical, MH/SA, Dental, Disability, FSA, Vision & Hearing, with Cultural Linguistic: English/Spanish - is intended as a handy, comprehensive reference tool for health plans, contact center operations management, frontline customer service representatives, care managers, care advocates, health providers, practitioners, clinics, facilities, hospitals, including health care administration principals, salespeople, brokers, producers and outsourced vendors. Technical terminology or business jargon is specific to each country, region or business setting, so there is always a dire need for specific translation of that "business edge" directly into Spanish without the need for verbose descriptions of what a specific term means in United States English. Global business languages are in constant evolution. Spanish is integral to the United States for doing core business and effectively engaging in direct client or patient relationship management interactions. Students enrolled in high schools and colleges across America learn the language not only as a primary advantage, but, also, increasingly, as a required functional skill set for their future careers. Corporate America is invested in the Spanish-speaking sales and service markets via world-class contact centers, health plans, and other business-specific, innovative, for-profit models going head-to-head with English in the United States and internationally. English is considered as the lingua franca in the world today, and there is no doubt Spanish is its continual, profitable business counterpart. There is ongoing, enormous, consequential, and immediate need for consistent, up-to-date health care terminology that provides specific industry accuracy in all cross-functional, matrixed business environments. Anyone doing business in the United States, or with the United States, will find a wealth of useful, future-facing, specific industry references at your disposal to help make the most of your success in the business world.

Essays on Insurance and Taxation Aug 24 2022 This dissertation consists of four distinct essays. In an essay entitled "Claim Timing and Ex Post Adverse Selection: Evidence from Dental Insurance," I explore the impact of strategic timing on insurance market allocations. If people can delay a claim just long enough to buy more insurance coverage in anticipation of it, severe adverse selection may result, and in extreme cases, this can lead to the complete unraveling of an insurance market. I study these forces by analyzing dental treatments and insurance, with the goal of understanding insurance in the market for dental care and also revealing lessons that apply to insurance markets more broadly. Using rich claim-level data from a large firm, my analysis reveals that the strategic delay of treatment and the associated adverse selection may be an important factor in explaining why so few people have dental coverage in the US and why typical dental "insurance" contracts provide so little insurance. More generally, my results suggest that insurance products without contract features designed to limit coverage for strategically delayed costs (e.g., open-enrollment periods, pricing pre-existing conditions) may generate unraveling. An essay entitled "The Hated Property Tax: Salience, Tax Rates, and Tax Revolts" (with Caroline Hoxby), explores the relationship between the salience of the property tax and observed property tax rates. We hypothesize that high salience explains the unpopularity of the property tax, the level of the property tax, and prevalence of property tax revolts. To identify variation in the salience of the property tax over local jurisdictions and over time, we exploit conditionally random variation in tax escrow, a method of paying the property tax that makes it much less salient. We find that areas in which the property tax is less salient are areas in which property taxes are higher and property tax revolts are less likely to occur. In an essay entitled "Private Coverage and Public Costs: Identifying the Effect of Private Supplemental Insurance on Medicare Spending" (with Neale Mahoney), we explore the impact of private supplemental insurance on Medicare spending. Private supplemental insurance to "fill the gaps" of Medicare, known as Medigap, is very popular. We estimate the impact of this supplemental insurance on total medical spending using an instrumental variables strategy that leverages discontinuities in Medigap premiums at state boundaries. Our estimates suggest that Medigap increases medical spending by 57 percent--or about 40 percent more than previous estimates suggest. Back-of-the-envelope calculations indicate that a 20 percent tax on premiums would generate combined revenue and savings of 6.2 percent of Medicare baseline costs. An essay entitled "The Effect of Insurance Coverage on Preventive Care" (with Mark Cullen), explores the effect of insurance coverage on preventive care utilization. Using health insurance claims data from a large company, this paper examines the implementation of an insurance benefit design which differentially increased the marginal price of curative care (non-preventive care) while decreasing the marginal price of prevention. We examine the effect of the differential price change on the use of preventive procedures. We reveal evidence consistent with an important negative cross-price effect; that is, increases in the price of curative care can depress preventive care utilization.

New Deal Medicine Jul 31 2020 In New Deal Medicine, physician and historian Michael Grey brings to light the diversity, reach, and complexity of the medical care programs of the Farm Security Administration. Drawing on oral histories, archival records, and medical journals from the 1930s and 1940s, Grey finds the programs were both a rehearsal for more modern forms of medical organization and a lightning rod for critics of "socialized medicine." He assesses the compromises made to try to preserve the programs' somewhat "secret objective" of providing the poor with health care while not running afoul of conservative politicians and their colleagues in the AMA. Acknowledging the effect of changing demographics (doctors, nurses, and farmers alike marched off to war) and economics, Grey contends that these factors do not fully explain the demise of the FSA experiment in health care. Rather, the political winds shifted at the same time that the medical profession acted to protect its authority over the practice of medicine. New Deal Medicine shows that, by the peculiarly American style of "incrementalism," many of the FSA medical care structures and goals have been at least partially realized in the United States and in Canada. The lessons learned by the FSA personnel were transferred into health programs in Canada, in the labor unions, and finally in Lyndon Johnson's "Great Society."

Sociology in Government Aug 12 2021 From 1919 through 1953, the U.S. Department of Agriculture housed the Division of Farm Population and Rural Life—the first unit within the federal government established specifically for sociological research. Distinguished sociologists Charles Galpin and Carl Taylor provided key leadership for 32 of its 34 years as the Division sought to understand the social structure of rural America and to do public policy-oriented research. It reached the height of its influence during the New Deal and World War II as it helped implement modern liberal policies in America's farming sector, attempting to counteract the harsh effects of modern industrialism on the rural economy. In addition, the Division devoted resources to studying both the history and the contemporary state of rural social life. *Sociology in Government* offers the first detailed historical account and systematic documentation of this remarkable federal office. The Division of Farm Population and Rural Life was an archetypal New Deal governmental body, deeply engaged in research on agricultural planning and action programs for the disadvantaged in rural areas. Its work continued during World War II with farm labor and community organization work. Larson and Zimmerman emphasize the Division's pioneering practices, presenting it as one model for applying the discipline of sociology in the government setting. Published in cooperation with the American Sociological Association, *Sociology in Government* preserves the history of this pathbreaking research unit whose impact is still felt today.
